

FemiLift

Give Your Feminine Life a Lift

THE LEADING SOLUTION
FOR OPTIMAL FEMININE
WELLNESS AT ANY AGE

GIVE YOUR FEMININE LIFE A LIFT

The natural processes of your lifecycle as a woman, such as childbirth and hormonal changes, can lead to various conditions such as GSM/VVA and SUI, in which women may experience involuntary urine leakage, vaginal dryness and discomfort during intercourse. As a result, you may experience a decrease in the quality of your life and sense of self esteem. FemiLift is a state-of-the-art, minimally invasive outpatient treatment that provides optimal results for various feminine conditions – regardless of your age or stage in life. It is quick, safe and provides highly effective results.

We believe in wellbeing of body and soul: a positive celebration of feminine life.

STATE-OF-THE-ART TECHNOLOGY

Resorting Vaginal Health*

Like skin, vaginal tissue is made up of collagen fibers, which gives it strength and flexibility. FemiLift uses breakthrough CO₂ laser technology to gently heat vaginal tissue, contracting existing fibers and stimulating the formation of new collagen.

This improves the functionality of the entire vaginal area by increasing the thickness of the vaginal wall, increasing blood vessel density and restoring lubrication and elasticity.

EFFECTIVE, NON SURGICAL SOLUTION

Keep on going

One of the major benefits of the FemiLift treatment is the fact that it is conducted in a very short time often at a clinic and does not affect your routine. Similar to any vaginal ultrasound exam, a trained practitioner inserts a uniquely-designed, hygienic probe into the vagina, gently treating the vaginal tissue.

The entire treatment takes less than 30 minutes, with minimal downtime allowing you to get right back to your day immediately after the treatment!

THE FEMILIFT ADVANTAGE

100% Safe: Clinically proven, cutting edge technology; hygienic disposable sleeve.

Effective: Real results that make a difference.

Versatile: Treats common female health conditions; 2 probe sizes for varying anatomical sizes.

Outpatient Environment: Quick, minimally invasive, minimal downtime.

Part of Your Life: Easily integrated into routine healthcare and lifestyle management.

PROVEN HIGH PATIENT SATISFACTION AND IMPROVED QUALITY OF LIFE.

WHAT DOES FEMILIFT TREAT?

Stress Urinary Incontinence (SUI)

SUI is a term that describes involuntary leakage of urine during activities that increase pressure in the abdomen, such as coughing, sneezing, laughing or exercise. This condition is caused by a loss of strength in the urethra due to a weakened pelvic support structure. A FemiLift treatment reduces the symptoms of SUI by increasing the epithelial thickness, inducing the formation of new collagen fibers, and enriching the blood supply of the vaginal walls. These improvements can help strengthen the pelvic wall.

Post-Menopause

The shift in hormones that occurs with menopause can cause the lining of the vagina to become thinner, drier, less elastic and inflamed. FemiLift improves the vaginal health, increasing the thickness of the vaginal walls and restoring lubrication. The treatment reduces uncomfortable symptoms such as itching and burning, and helps reduce pain during intercourse.

Vaginal Laxity

Women undergo physiological changes in their body throughout different stages of life. Sometimes, the vaginal area may feel stretched and dry and the pelvic floor may be weakened. FemiLift helps to improve vaginal laxity and restores elasticity.

Vaginal Dryness & Pain

FemiLift helps women suffering from dryness, itching, burning and pain around the vaginal entrance. A minimal invasive, short clinic-based treatment can help improve these limiting symptoms and can significantly improve your quality of life.
